

Practical 35

Write a python program to print telephone numbers placed in sentences using regular expressions.

```
[1]: import re

data1 = 'Contact me at: 123-456-7890.'
data2 = 'My office number is 987-654-3210.'
pattern = r'\d{3}-\d{3}-\d{4}'

m1 = re.search(pattern, data1)
if m1:
    print("Phone number in data1:", m1.group())
else:
    print("No phone number found in data1.")

m2 = re.search(pattern, data2)
if m2:
    print("Phone number in data2:", m2.group())
else:
    print("No phone number found in data2.")
```

Phone number in data1: 123-456-7890

Phone number in data2: 987-654-3210

```
[ ]:
```
